

Now you can pothole with air..

without digging a hole in your pocket!

INTRODUCING VACMASTERS SYSTEM 1000

LOW COST • SMALL SIZE • HIGH PERFORMANCE

VACMASTERS, the leader in Air-Vacuum excavation, has just made potholing with air more *affordable* than ever. Announcing the VACMASTERS SYSTEM 1000. The trailer or truck-mounted SYSTEM 1000 also has water on board for the few instances when you'll be potholing in wet clay or caliche. With the SYSTEM 1000, you can dig effectively in any kind of soil, while 95% of the time you'll be potholing with air.

Compared to water, the VACMASTERS SYSTEM 1000 using air is:

- **faster** – pothole in most soils in 7–8 minutes
- **efficient** – spoils stay dry for backfilling
- **economical** – eliminates mud hauling and disposal costs
- **safer** – for operator and costly buried utilities
- **DOT friendly** – won't harm road base.

Join the VACMASTERS Air Force. Now's the time to stop wallowing in the mud and start potholing with air power.

To see VACMASTERS air in action, view our demo at www.vacmasters.com or for more information, call 1-800-466-7825 or e-mail us.
