

# PROFITABLE POTHOLING WITH AIR

## **"We've built our business *from the ground down* with VACMASTERS!"**

*Mike Arme, President, Underground Solutions, Inc.*

"Potholes are our business and we make them better than anybody in Southern California—about 10,000 a year. Since acquiring our state-of-the-art air-vacuum excavation potholing equipment from VACMASTERS, our business has boomed. In just thirteen months, we have grown from one VACMASTERS SYSTEM 4000 to four, as the need for due diligence is realized by consulting engineering and environmental firms, water and sewer districts, municipal and utility customers. The need for a precise, safe way to expose underground utilities fast is the driving force behind our business and could be for yours.

"Underground Solutions locates utilities quickly and accurately through the use of VACMASTERS advanced air-vacuum excavation systems. They deliver high-pressure supersonic air

through a special nozzle, filling the cracks and crevices in the soil until it actually explodes from the pressure within for easy vacuuming and later backfilling with the same dry spoils. There's even water on board as a backup. We can open a precise 12"×12"×5' hole in an average of about 7 minutes. This dry excavation system means we don't have to use high-pressure water, which is not only dangerous to operators because it is conductive, but is also capable of cutting the utility.

"Air is non-disruptive, with no damage to the road base and there is no need to haul off mud and return with fill dirt. We pay a little more for one of VACMASTERS Air Vacuum Excavation Systems but it pays for itself with each job that we do. That's why we have four and hope to order more soon."

**Whether your needs are for many potholes or only a few, VACMASTERS has the air-vacuum excavation system right for your requirements and bottom line. See our demo on-line at [www.vacmasters.com](http://www.vacmasters.com) or call or E-mail us.**
